Company

IntelliCyt Corporation develops innovative, high-throughput, high-content cell and bead-based screening solutions for use in phenotypic drug discovery, antibody discovery and in vitro toxicity testing. IntelliCyt's proprietary technologies, instrumentation, assays and software products address the pervasive need to provide turnkey solutions that increase productivity in pharmaceutical, biotechnology, and life science research.

Products

IntelliCyt offers an integrated application solution for screening cellular assays, multiplexed beads, microbes and mixed formats that includes:
The new **iQue™ Screener** is the next revolution in screening cells and beads in solution, integrating IntelliCyt's technology into a benchtop system ideal for the screening environment. Researchers can now evaluate compound effects on non-adherent cell lines, primary immune system cells and molecular interactions using cell or bead-based assays. The iQue Screener's automation-friendly features ensure extended walk-away time.
MultiCyt™ Reagents and Screening Assay Kits are validated for 96- or 384-well applications on IntelliCyt's screening systems to create a complete solution so you will be able to transfer assays from other platforms and start achieving better results faster.
For researchers who want to increase the capacity of their existing flow cytometer, IntelliCyt provides the **HyperCyt® system**.
